FARM PRODUCTION, DISPOSITION, AND INCOME OF TURKEYS, 1944-45 1/

Turkey production in 1945 reached a record high of 44,330,000 birds -- 24 percent more than in 1944 and 34 percent above the 5-year (1939-43) average. Production was above that of 1944 in all States except Montana, which showed no change.

California led all States in the production of turkeys in 1945, with 5,124,000 birds, followed by Texas with 4,602,000, Minnesota with 4,155,000, Oregon with 2,582,000 and Iowa with 2,568,000 birds. These 5 States accounted for 43 percent of the turkeys produced in the United States. The Western States produced 30 percent of the Nation's turkeys in 1945, the West North Central 29 percent, the South Central 15 percent, the East North Central 11 percent, the North Atlantic 8 percent and the South Atlantic 7 percent.

Turkey Sales Larger: Turkeys sold from farms in 1945 totaled 41,609,000 birds -- 19 percent more than in 1944 and the largest number of record. About 7,323,000 birds sold in 1945 were carried over from the 1944 crop. Of these, 2,102,000 were late-market birds sold during January and February 1945 and 5,221,000 were breeder hens and toms, sold after the breeding season, mostly in May and June. Of the 44,330,000 birds produced in 1945, about 2,661,000 late-market birds and 6,073,000 breeder hens and toms were carried into 1946.

Lower Prices: The average price received for turkeys sold in 1945 was 33.6 cents per pound live weight, compared with 33.9 cents in 1944 and 32.6 cents in 1943. The supply of turkeys in 1945 was ample and well distributed and under a good demand sold close to O. P. A. ceilings. There was a price differential between hens and heavy weight toms for the first time since the war began, with a greater demand for hens and light weight toms.

Cash Income Increases: Cash income from the sale of 722,626,000 pounds (live weight) of turkey in 1945 was \$242,569,000 -- an all time high. Cash income was 22 percent above that of 1944 and was more than double the 5-year (1939-43) average. About 43 percent of the cash income from the sale of turkey meat went to producers in the 5 leading States of California, Minnesota, Texas, Oregon and Iowa, which rank in the order named in cash income from sales in 1945.

Market Bird Heavier: Market turkeys continue to increase in weight because of the increasing numbers of the broad-breasted type of bird. Hens sold in 1945 averaged 13.4 pounds live weight, compared with 13.1 in 1944. Toms averaged 21.3 pounds compared with 20.3 in 1944. All birds sold averaged 17.4 pounds in 1945, compared with 16.8 in 1944 and 15.7 for the 5-year average. The heaviest market birds are produced in the Pacific Coast States, where the broad-breasted bronze type of bird predominates and where birds are raised to heavier weights for the freezer market, which supplies the hotel and restaurant trade.

Turkeys Marketed Earlier: Turkeys were marketed earlier in 1945 than in any of the 4 preceding years. The tendency during the past 5 years has been toward earlier hatchings and earlier marketing of turkeys. About the same proportion of breeders were marketed in May and June, 1945 as during these 2 months in 1944.

In August, September and October about 22 percent of the annual sales were made, compared with 18 percent in 1944. By December 1, about 71 percent of annual sales had reached the market, compared with 69 percent in 1944 and 64 percent in 1943. In the West North Central States, where slightly less than half of the early birds are raised, about 35 percent of the 1945 sales were early birds marketed in August, September and October, compared with 30 percent during the period in 1944. In the Western States, where producers specialize in the production of early birds as well as the heavy weight birds, about 21 percent of the 1945 turkey sales were early birds moved to market during August, September and October. This is the heaviest early marketing in this area in 5 years of record.

1/ Prepared by E. Smith Kimball, Paul W. Smith, and Robert F. Moore, Agricultural Statisticians.
